

Brightness Gradient Tutorial 2

STEP 1

Make a shot appear as if it was taken at sunrise. In order to do so we brighten up the right part of the picture as if the sunlight was coming from this direction.

► Open Picture and Choose “Effects / Brightness Gradient”

The brightness gradient dialog box will appear.

STEP 2

► Position the gradient arrow and increase brightness and saturation

Move the gradient arrow into a position as shown in the example with the arrowhead pointing downwards (1). Increase the value of brightness to 256 and saturation to 146 with the sliders at the right side of the dialog box (2). Click on “Accept” (3) to save the changes.

STEP 3

► Move gradient arrow to new position and again increase brightness and saturation

Now move the gradient arrow into its new position with the arrowhead pointing to the lower right corner. Increase the value of brightness to 133 and saturation to 81. Click on “Accept” to save your work.

STEP 4

► Re-position the gradient arrow. Increase brightness and decrease saturation

Now move the gradient arrow to its new position with the arrowhead pointing downwards (1). Increase the value of brightness to 256 and decrease the saturation to -41. Click on “Execute” (2) to save your work and return to the main workspace.

RESULT

► Result

As you can see, the changes added a dramatic touch to the originally uniform picture.

In the example to the left we have put a frame around the picture using the “MasterFramerDeLuxe”. Framing pictures is described in detail in the [“Framing-Tutorial”](#) in the [tutorials section](#) of the PhotoPerfect website.
